

CommitTrack — Project Audit

Generated 15/5/2026, 4:54:14 pm · local-first financial commitments app

Current health

- Build, lint, and 12 unit tests pass.
- Stack: React 19, Vite 8, Tailwind, localStorage, PWA.
- No TypeScript; README still default Vite template.

Bugs and risk areas

- Monthly snapshots are global (one per calendar month), not per profile label.
- Historical snapshot freeMoney may be wrong until a new month is recorded.
- Data only in localStorage — no cloud sync; clearing browser data loses everything.
- Proof images capped at 400KB each; many proofs can hit storage quota.
- PWA notifications need permission + opening the app; no background push when closed.
- Schema version key only; no step-by-step migrations for old shapes.

Partial / basic implementations

- Notifications: in-app bell + daily digest (max 3); no SMS, push server, or due-time scheduling.
- Profiles: default/family/business labels only; no create/rename; export includes all profiles.
- Role modes: nav + dashboard copy; not deeply different per mode.
- Lending: schedules, compound interest, trust — Simulate UPI records payment locally only.
- Goals: create/delete + per-goal savings; no goal edit UI.
- Analytics: rich charts; lending not in 12-month cashflow forecast series.
- Export JSON/CSV yes; import/restore no.
- Onboarding: no re-run from Profile.
- Theme: light / dark / system (Profile).

Not implemented

- Backend, auth, Supabase, real UPI.
- Cloud backup, SMS, shared family accounts (Plus placeholder in Profile).
- JSON import, factory reset, dark-only polish on every gradient card.
- Bank/SMS parsing, ERP module, E2E tests, CI in repo.

Working well

- Commitments CRUD, recurring new-row-on-paid, filters, payments.
- Lending CRUD, detail dashboard, agreement HTML, proofs.
- Home dashboard, Analytics, Tools (prepayment, payoff, goals).
- Onboarding, PWA install shell, mode-based nav (student hides Lending).
- Engines: burden, pressure, affordability, intelligence, snapshots.

Dead / unused code

- categoryOpenTrend, monthlyPressureScore, pressureSeverity in engines.
- REMINDER_TYPES constant, wasPermissionAsked, useProfileScope hook.
- savedTowardGoals legacy field (migrated to goals on load).

Suggested next priorities

- JSON import paired with export.
- Background due reminders (Periodic Background Sync or push).
- Per-profile monthly snapshots.
- Include lending in cashflow forecast.
- Real profile management or remove filter until ready.
